

# **METHOD AND SYSTEM FOR GENERALIZED COMMON GATEWAY INTERFACE PROCESSING**

## **ABSTRACT OF THE DISCLOSURE**

Common Gateway Interface (CGI) processing is performed on networks such as the Internet, or Web, to allow users to enter input data, via CGI forms presented as Web pages by a browser, for processing by a network server. Existing CGI processing methods entail form-specific handling programs for each distinct CGI form, which typically number in the thousands. The present invention simplifies and streamlines CGI processing by providing a single, generalized CGI processing routine for a plurality of distinct CGI forms.
